

# FRESHMAIL

DcData is pleased to announce their latest offering in **SPAM-fighting** products, **"Freshmail"**.

Aimed at small, medium and large enterprise, **"Freshmail"** is unique in its offerings because it filters out unwanted emails before they reach your corporate network.

Emails are first scanned off-site for SPAM content and only then passed to your email server for delivery, ensuring that only legitimate emails pass through, saving bandwidth and resources. Because SPAM is continuously changing, many single technology **anti-SPAM** solutions in the marketplace fall short of their promises.

**"Freshmail"** bundles several of the best **SPAM-fighting** techniques available into one solution that really works! Global Internet surveys show that SPAM transmission is on the rise and is responsible for the majority of the traffic on the Internet. Unwanted and often offensive emails waste precious Internet bandwidth, CPU time, storage space and employee productivity.

## BENEFITS

- Stops Unsolicited Bulk email (SPAM) before your connection to the Internet
- Reduces client-side bandwidth and server load
- Reduces client administration overheads
- No initial capital outlay for hardware or software
